

bring your antique or unique fireplace back to life

custom-made gas and electric fires

Did you know that *Magiglo* can make a bespoke gas or electric fire to the exact dimensions of your fireplace?

If you are lucky enough to be the owner of an antique fireplace or basket, whilst you love the idea of having a fire once again, hopefully you would be appalled by the idea of ripping it out to have a modern fire fitted.

Whether it is a tiny inset Victorian casting, a huge baronial log basket, or a hand built hole-in-the-wall fire, simply have your local fireplace retailer or installer measure it, send us the sizes and your choice of options, and in under a month your 'dead' fireplace will once again be the focal point of your room.

Many options for your *Magiglo* custom fire

Your unique custom fire can be personalised even further to your requirements.

Ask your retailer to show you the *Magiglo* custom order sheet. This offers you a wide selection of options to make the fire perfect for you.

Custom gas fire

The build quality of your Custom **gas** fire will be second to none. The burner tray is fabricated and cut to the exact size by hand by skilled craftsmen. As every fire is unique, no automated processes can be used. Once fabricated it is hand sprayed in a special paint which can withstand the high temperatures it will encounter during its life. The burner board is hand cut to fit the tray perfectly and drilled precisely to give your fire the most realistic flame possible.

Various sizes of imitation coals or pebbles are then selected to suit the size of your fireplace to create a richly glowing fuel bed and flame effect. Finally, prior to packaging in its own moulded foam 'nest', your fire will be run on gas and tested to strict European safety standards.

All *Magiglo* gas fires feature an oxygen depletion sensor that monitors the air supply in the room and automatically shuts off the fire if the oxygen supply falls below a safe level.

The components fitted during assembly are selected for quality not price. *Magiglo* even fit unique silencers to the injectors so your peace will not be disturbed if reading quietly in front of your fire.

Choose between manual, remote or total control.

Gas installations must be carried out by a Gas Safe registered engineer.

- A Existing fireplace
- B Template drawing
- C Folding sheet metal to form burner tray
- D Burner tray and burner tray components
- E Spraying burner tray
- F Control valve assembly
- G Cutting of gas fire burner board
- H Burner assembly
- I Gas fire testing
- J Gas pressure setting
- K Packing fire ready for despatch
- L Finished gas fire with coal-bed in situ

Custom electric fire

If you choose a Custom **electric** fire, the tray is fabricated and sprayed in the manner described for the gas fire. The optimum number of lamps are chosen as dictated by space. If there is sufficient room each will have a spinner to give a pleasant flickering effect. The coal bed is then hand cut and moulded to suit. During assembly a switch is fitted in line with the cable so easy access is ensured. A coal or pebble effect fuel bed is then selected and finally the finished fire is tested to European standards.

All *Magiglo* fires carry a 12 month manufacturer's guarantee.
